

Currency Conversion Sheet

Home currency: _____ Currency there: _____ Rate checked on: _____ Checked where: _____

1 unit at home buys: _____

1 unit there costs: _____

Worked example - the figure below is made up, not today's rate

If 1 unit at home bought 1.25 units there, then 20 at home = $20 \times 1.25 = 25$ there, and 25 there = $25 / 1.25 = 20$ at home. Write today's own rate in the boxes above and work down the ladders the same way.
